

## Bainbridge Forest Preservation Project Monitoring Report

**Project Operator Name:** Western Reserve Land Conservancy

**Project Name:** Bainbridge Forest Preservation Project

**Project Location:** Bainbridge Township, Geauga County, Ohio

**Deadline to Submit to CFC** (*triennial on the date of the first Verification Report*): June 2, 2024

1. Has the contact info for the Project Operator changed? If so, please provide new contact info.

No

2. Have there been changes in land ownership of the Project Area?

Yes. The property was transferred on 7/29/2022 from Western Reserve Land Conservancy to Songyard Farms LLC. Western Reserve Land Conservancy continues to hold a conservation easement on the property.

3. Have there been any changes in the Project Design?

No

4. Have there been any changes in the implementation or management of the Project?

No

5. Have there been any significant tree or canopy losses? (Provide any Google Earth Imaging or photos to show no significant changes).

There has been no significant tree or canopy loss based on comparison of the most recent Nearmap (0.5m) satellite image (March 2024) and that of a UDDA NAIP (1m) satellite image (June 2021), both provided by Upstream Tech Lens.

See Attachment A: Upstream Tech Lens satellite images from June 2021 and March 2024.

6. Please estimate the percentage of the Project Area that appears to be gaining stored carbon stocks.

No significant gains in carbon stocks over the 3-year period since the project start date.

7. Please estimate the percentage of the Project Area that appears to be losing stored carbon stock.

No significant losses in carbon stocks over the 3-year period since the project start date.

8. Please estimate the number of acres of significant soil disturbance since the previous monitoring report. Examples include plowing and removal of topsoil. For the purposes of these reports, areas of soil exposed by trees tipping over are not counted as areas of significant soil disturbance.

No area within Project Area has experienced significant soil disturbance over the 3-year period since the project start date.

9. Any other significant elements to report?

Some recent heavy thunderstorms, including a tornado in September 2023, have brought down a couple of large trees in the forest, but the downed trees caused very little damage to the surrounding trees and no significant loss to the canopy.

Signed on June 4 in 2024, by Shane Wohlken, Land Steward-Central Region, for Western Reserve Land Conservancy.

NOTE  
This attachment compares the Lake-Bonnie Carbon Credits Project Area. There has been no significant tree or canopy loss based on a comparison of a March 2024 high-definition satellite image taken by Nearmap (0.5m) and a June 2021 high-definition satellite image taken by UDDA NAIP (1m), both provided by Upstream Tech Lens.
